

NAME: James yego
ADM: 2024BS156957
UNIT: ED/B/7250-2024JANINTAKE

a 5-day storyboard for Calculus.

Day	Topic	Learning Outcomes	Activities	Out-of-Class Activity	Learning Experiences
Day 1	Introduction to Calculus	Understand the basic concepts of calculus, including limits and continuity.	- Prerecorded video lecture on limits and continuity. - Live Q&A session.	- Review provided reading materials on limits and continuity. - Prepare questions for the Q&A.	- Gain a foundational understanding of calculus. - Clarify initial questions and concepts.
Day 2	Differentiation Basics	Learn the fundamental rules of differentiation and how to apply them.	- Interactive module on differentiation rules (e.g., product rule, quotient rule). - Practice problems.	- Complete practice exercises on differentiation rules. - Engage with the interactive module.	- Develop skills in differentiation techniques. - Apply rules to solve problems.
Day 3	Applications of Differentiation	Understand how differentiation is used to solve real-world problems (e.g., optimization).	- Live workshop on applying differentiation to optimization problems. - Group problem-solving session.	- Work on optimization problems and submit solutions. - Participate in the workshop to apply differentiation techniques.	- Solve real-world optimization problems. - Enhance problem-solving skills using differentiation.
Day 4	Integration Basics	Learn the fundamental concepts of integration and basic techniques (e.g., substitution, integration by parts).	- Prerecorded video on integration techniques. - Interactive quiz on integration methods.	- Complete practice problems on integration techniques. - Watch the video to understand integration methods. - Take the quiz to test knowledge.	- Understand integration methods and techniques. - Practice solving integration problems.
Day 5	Applications of Integration	Explore applications of integration in areas such as area under curves and volume of solids.	- Live session on integrating applications (e.g., area, volume). - Writing workshop with peer review.	- Develop a report on the applications of integration in solving real-world problems. - Review and refine the report through peer feedback.	- Learn about advanced applications of integration. - Gain experience in applying integration techniques to real-world scenarios.
